

Founder-level product scope, flows, modules, and technical planning notes

MVP Philosophy

The MVP should prove marketplace behavior, not impress users with advanced technology. The first version should be simple enough to build and operate, but complete enough to test whether clients post jobs, providers respond, offers are made, jobs are completed, and ratings are submitted.

User Roles

- Guest - can view basic landing page and public categories.
- Client - can create requests, receive offers, choose providers, chat, confirm completion, rate providers.
- Provider - can create profile, select categories, view matching requests, send offers, chat, update job status, rate clients.
- Admin - can manage categories, users, verification, requests, disputes, reports, and platform settings.
- Operations Staff - optional role for manual matching, onboarding, and support during pilot.

Core Modules

Authentication and Profiles

Register/login. Role selection. Profile photo. Contact information. Location area. Provider category selection. Verification status.

Service Requests

Create request. Category and subcategory. Description. Budget. Urgency level. Location. Photo/video attachments. Request status.

Offer System

Provider accepts client budget. Provider counter-offers. Provider adds estimated schedule and notes. Client compares offers. Client selects one provider.

Messaging

Basic chat once provider has offered or been selected. System messages for status updates. Admin review access for disputes if necessary.

Ratings and Reviews

Client rates provider. Provider rates client. Request cannot be fully closed until rating reminder is addressed. Allow one pending rating before blocking additional requests, to avoid user frustration.

Admin Dashboard

User management. Request monitoring. Provider verification. Category management. Dispute review. Basic metrics.

Urgency Levels

- Emergency - immediate or within 1 hour if possible.
- Today - needs service within the day.
- This Week - flexible but soon.
- Flexible - no urgent deadline.
- Scheduled - client has a preferred date and time.

Suggested Job Status Flow

- Draft - client has not submitted request.
- Posted - request is visible to matching providers.
- Offers Received - one or more providers responded.
- Accepted - client selected provider.
- In Progress - provider started or scheduled the job.
- Completed by Provider - provider marked job completed.

- Confirmed by Client - client confirmed completion.
- Rated - both rating actions completed or resolved.
- Cancelled - cancelled by client, provider, or admin.
- Disputed - requires admin review.

MVP Database Concept

This is a planning-level structure, not final engineering documentation.

Entity	Purpose	Important Fields
users	All accounts	id, name, phone, email, password, role, status, created_at
provider_profiles	Provider-specific profile	user_id, bio, years_experience, service_radius, availability, verification_level
categories	Service categories	id, name, parent_id, description, active
provider_categories	Provider skills	provider_id, category_id, skill_notes
requests	Client service requests	client_id, category_id, description, budget, urgency, location, status
request_files	Photos/videos	request_id, file_path, file_type
offers	Provider offers	request_id, provider_id, amount, notes, schedule, status
jobs	Accepted work	request_id, provider_id, agreed_amount, status, started_at, completed_at
messages	Chat messages	job_id or request_id, sender_id, message, created_at
ratings	Two-way feedback	job_id, rater_id, ratee_id, score, review, rating_type
verifications	Trust checks	user_id, type, status, reviewed_by, reviewed_at
disputes	Issue tracking	job_id, complaint_by, reason, details, status, resolution

Non-Functional Requirements

- Mobile-first responsive design because many users will access through phones.
- Simple wording and Cebuano-friendly labels where useful.
- Fast request posting with minimal required fields.
- Safe file upload handling for photos/videos.
- Basic moderation and admin review tools.

Definition of Terms

These terms provide a shared vocabulary for reading and discussing the KAILA founder package.

KAILA

The proposed local services marketplace that helps clients find trusted local help and helps skilled workers become more visible.

Client

A person, household, business, or organization that posts a service need or hires a provider through KAILA.

Provider

A skilled worker, freelancer, technician, shop, or service professional who offers work through KAILA.

Service Request

A client post describing the job needed, location, budget, urgency, details, and optional photos or files.

Offer

A provider's response to a service request, including price, availability, scope notes, or proposed schedule.

Counter-Offer

A revised offer made when the provider or client proposes a different price, schedule, or service scope.

Marketplace

The two-sided system where clients and providers discover, evaluate, transact, and rate each other.

MVP

Minimum Viable Product; the simplest usable version of KAILA needed to test marketplace behavior.

Pilot

A limited real-world launch in one city or area used to validate demand, provider response, operations, and trust.

Concierge Pilot

A manual version of the marketplace run with simple tools such as forms, spreadsheets, Facebook, and Messenger before building the full app.

Verification

The process of checking provider identity, service information, work samples, permits, certificates, or references.

Rating

A post-job score or review used to build trust, measure reliability, and improve future matching decisions.

Dispute

A reported disagreement about price, quality, scope, completion, behavior, payment, or other job-related concerns.

Lead Credit

A future monetization unit that may allow providers to access or respond to qualified service opportunities.

Premium Profile

A future paid provider profile upgrade that may improve visibility, presentation, or trust signals.

Business Account

A future account type for shops, small businesses, teams, or organizations with recurring service needs or multiple providers.

Go/No-Go Criteria

The evidence-based thresholds used to decide whether to proceed, narrow the scope, redesign, or pause.
