Pilot City: Gingoog City

**Pilot proof in
Gingoog City.
National
expansion story
for the
Philippines.**

Finding trusted local help is still informal, slow, and hard to verify.

Customers

- Hard to find trusted workers quickly
- No standardized pricing or offer comparison
- No clear guarantees, ratings, or work history
- Communication scattered across referrals, Facebook, and Messenger

Service Providers

- Depend heavily on referrals
- Inconsistent job flow and income
- Limited digital presence
- Difficult to acquire customers outside their network

KAILA turns informal referrals into a structured request, match, pay, and review workflow.

Philippines is the upside market; Gingoog City is the proof market.

TAM

Philippine local services spend

Est. PHP 250B+ annual addressable household and small-business service activity.

SAM

Digitally reachable early categories

Est. PHP 25B-50B across repair, maintenance, cleaning, digital services, and skilled work.

SOM

3-year realistic capture

Est. PHP 20M-60M GMV from disciplined city-by-city expansion after Gingoog validation.

Sizing is an explicit planning estimate using PSA household/service spend categories, DTI MSME data, and KAILA category assumptions.

Early mockups show the core marketplace workflow before full app build.

Request board for client needs and provider offers

Provider directory with categories, areas, and trust signals

Admin-style dashboard for pilot operations and manual matching

Mobile-first experience planned for clients and providers

KAILA monetizes after the marketplace proves real provider value.

Revenue Stream	Description
Service fee	% commission per completed transaction after trust is proven
Featured listings	Provider promotion and profile boosts
Subscription	Premium provider accounts with better visibility
Ads	Local business promotions and category sponsorships

The behavior is already digital; the trust system is missing.

97.5M internet users

DataReportal reported 83.8% internet penetration in the Philippines in January 2025.

142M mobile connections

Mobile connectivity is larger than the population, making mobile-first matching practical.

57.4% digital payment volume

BSP reported digital retail payments reached 57.4% of transaction volume in 2024.

MSME-heavy economy

DTI reports MSMEs make up 99.66% of Philippine business establishments.

KAILA wins by combining local focus, search, verification, ratings, and structured workflows.

Feature	Facebook	Generic Marketplace	KAILA
Searchability	No	Yes	Yes
Ratings	No	Yes	Yes
Verification	No	Partial	Yes
Local focus	Partial	Partial	Yes
Request-to-offer workflow	No	Partial	Yes
Pilot operations support	No	No	Yes

Start narrow in Gingoog City, prove density, then replicate the playbook.

Demand Side

- Facebook groups
- Barangay partnerships
- Local ads and referrals
- Small business outreach

Supply Side

- Skilled workers
- Freelancers
- Tradespeople
- Repair shops and service microbusinesses

Gingoog Pilot

- Recruit providers first
- Run concierge matching
- Measure response and completion
- Convert proof into MVP scope

Current stage: founder-grade package, prototype mockups, and Gingoog validation plan.

50

Target providers

100

Client survey responses

matched jobs

5-8

Starting service
categories

30-45

Active pilot days

If actual interviews, waitlist, survey results, or pilot jobs are added, this becomes the strongest investor proof slide.

3-year model: realistic ramp from concierge pilot to paid marketplace.

Metric	Year 1	Year 2	Year 3
Active providers	150	600	1,800
Completed jobs	900	7,200	32,400
GMV	PHP 0.9M	PHP 8.6M	PHP 48.6M
Revenue	PHP 0.2M	PHP 1.7M	PHP 7.3M
Expenses	PHP 1.8M	PHP 3.6M	PHP 7.2M
Profit / Loss	(PHP 1.6M)	(PHP 1.9M)	PHP 0.1M

Assumptions are included in the investor package workbook and should be updated after the Gingoog pilot.
