KAILA Master Business Proposal

Founder-grade strategic proposal for a local services marketplace

Executive Summary

Core idea: KAILA is not just an app. It is a visibility platform for skilled people and a discovery platform for people who need trusted help. KAILA is a proposed local services marketplace for Philippine cities and municipalities where clients can find trusted skilled workers and skilled workers can become visible beyond their personal networks. The name comes from the everyday question people ask when they need help: "Naa moy kaila?" or "Do you know someone?" KAILA aims to become the organized answer to that question. The opportunity exists because service discovery in many local communities remains informal. People commonly search through Facebook posts, Messenger group chats, neighbors, relatives, or personal referrals. These methods can work, but they are slow, inconsistent, and difficult to compare. At the same time, many skilled people can repair, build, design, troubleshoot, install, maintain, or assist, but they remain invisible because they do not have a formal marketing channel. The proposed solution is a marketplace where clients post job requests with category, location, budget, urgency, and photos or videos. Service providers receive relevant job notifications, accept the proposed budget or submit counter-offers, and the client chooses based on price, rating, availability, and profile credibility. After completion, both sides rate each other to build trust.

Business Identity

Working Name

KAILA

Tagline Options

Kung wala kay kaila, naa mi. Local help, easier to find. Find trusted local help. Make skilled people visible.

Mission

To make skilled people visible and help communities find trusted local help faster.

Vision

A future where every skilled worker can be discovered and every household can quickly find reliable help for everyday problems.

Brand Meaning

KAILA connects directly to real local behavior. When people need help, they ask if anyone knows someone. The brand answers that familiar question with a structured, trustworthy marketplace.

Problem Statement

In many Philippine communities, the problem is not simply a shortage of skilled workers. The deeper problem is broken discovery. Clients do not know who is available, who is reliable, who is nearby, or what price is fair. Skilled workers do not know who currently needs their service and often depend on limited personal networks.

- Clients lose time asking friends, relatives, neighbors, Facebook groups, or Messenger chats for recommendations.
- Providers lose opportunities because they are only known within their barangay, friend circle, or past client network.
- Pricing is often unclear because there is no easy way to compare offers or understand standard service ranges.

- Trust is difficult because there is no single profile showing completed jobs, ratings, identity status, skills, and work history.
- Urgent needs are difficult to solve because clients cannot quickly identify who is available now.

Customer Segments

Primary Clients

Households needing repairs, installation, maintenance, cleaning, design, or troubleshooting. Renters and homeowners who need urgent or occasional help. Small businesses needing maintenance, layouts, computer support, delivery help, manpower, or event support. Students and professionals needing freelance or technical support.

Primary Service Providers

Experienced but uncertified workers who learned through practice, apprenticeship, family trade, or self-study. Certified technicians who want more clients and stronger digital credibility. Freelancers, home-based skilled workers, mechanics, computer technicians, graphic designers, carpenters, plumbers, electricians, and odd-job workers.

Early Adopter Profile

The strongest early users are people who already ask for help online and providers who already accept jobs through referrals but want more consistent leads.

Market Opportunity

The Philippine market is suitable for a local services marketplace because internet use is widespread and many small service providers operate independently. DataReportal reported 86.98 million internet users in the Philippines in January 2024, representing 73.6 percent internet penetration. DTI reported that MSMEs made up 99.63 percent of Philippine business enterprises in 2023. These indicators support the idea that a digitally assisted local marketplace can reach a large addressable base of clients and service providers. KAILA should begin with one pilot city rather than launching nationwide. Local density matters more than geographic reach. A marketplace becomes useful when clients know that enough providers nearby can respond quickly, and providers know that enough clients nearby are posting real jobs.

- Pilot market should have active Facebook groups and Messenger-based referrals, indicating existing demand.
- The city should have enough independent technicians, mechanics, freelancers, and home-service workers.
- The pilot should be small enough for manual operations but large enough to produce repeat demand.
- Initial success metric is not downloads; it is completed jobs, repeat requests, and provider retention.

Proposed Solution

Client Flow

Client creates an account. Client posts a service request with category, description, location, budget, urgency, and optional photos/videos. Relevant providers receive the request. Providers accept the budget or submit counter-offers. Client compares candidates and selects one. Job is completed and both parties rate each other.

Provider Flow

Provider signs up and selects service categories. Provider creates a profile with skills, experience, location, availability, photos, and optional certificates. Provider receives matching requests. Provider sends offer or counter-offer. Provider completes job and earns rating history.

Trust Flow

Identity verification is encouraged early and may become required for verified badges. Ratings become compulsory or semi-compulsory to protect platform trust. Both clients and providers are rated to avoid one-sided accountability. Completed job count, response time, cancellation rate, and dispute history form a reliability score.

Minimum Viable Product Scope

- Registration with client/provider role selection.
- Provider profile with service categories, skill descriptions, years of experience, location, profile photo, verification status, and availability.
- Client request posting with category, budget, urgency, location, description, and attachments.
- Provider notification or request dashboard by matching category and location.
- Offer/counter-offer system similar to inDrive but adapted for services.
- Client candidate comparison and selection.
- Basic messaging between matched parties.
- Job status flow: posted, offered, accepted, in progress, completed, rated, cancelled, disputed.
- Ratings and reviews for both parties.
- Admin dashboard for moderation, categories, users, and disputes.

Unique Value Proposition

For Clients

KAILA reduces the uncertainty of finding help by giving clients organized access to nearby workers, visible profiles, offers, ratings, urgency handling, and job history.

For Providers

KAILA helps skilled people become visible, receive job opportunities, build public reputation, and grow beyond word-of-mouth.

For Communities

KAILA strengthens the local economy by connecting real demand with local skill supply, especially among workers who may not have formal credentials but have proven experience.

Why Not Limit Providers to Certified Professionals?

In the Philippine context, many valuable skills are learned through experience, family trade, apprenticeship, self-study, or years of doing the work. Requiring certificates from the beginning would exclude many capable workers and weaken marketplace supply. KAILA should not use certification as the only gatekeeping mechanism. Instead, it should use a layered trust system.

- Verified Identity - government ID and selfie check.
- Verified Experience - portfolio photos, previous jobs, references, or community endorsements.
- Verified Certification - optional TESDA, NC II/NC III, business permit, or other credentials.
- Verified Reputation - ratings, reviews, completed jobs, response time, and dispute record.

Initial Service Categories

- Appliance repair: washing machines, refrigerators, aircon, electric fans, rice cookers, small appliances.
- Plumbing: leaks, clogged drains, faucet replacement, water line repair, toilet repair.
- Electrical: lights, outlets, breakers, wiring assessment, basic installation, troubleshooting.
- Computer repair: software installation, formatting, virus removal, slow PC optimization, basic hardware replacement.
- Mechanical: motorcycles, small engines, basic vehicle help, home-based mechanical repairs.
- Carpentry and home maintenance: doors, shelves, ceiling, minor repairs, furniture work.
- Welding and metal works: gates, grills, frames, repair jobs.
- Design and digital services: tarpaulin layout, invitations, social media posters, basic websites, document formatting.
- General odd jobs: moving help, cleaning, errands, event support, gardening, hauling.

Business Model

Phase 1 - Free Validation

No commissions. No paid subscriptions. Focus on proving that clients post real jobs, providers respond, and jobs are completed.

Phase 2 - Provider Visibility Products

Featured provider listing. Priority search placement. Verified badge enhancement. Portfolio boost. Monthly provider profile subscription.

Phase 3 - Transaction or Lead Revenue

Small commission per completed job where payment is handled or recorded through the platform. Lead credits paid by providers to bid on jobs. Business accounts for shops, repair centers, or local contractors. Sponsored category placements. Partnership offers with hardware stores, electronics shops, tool suppliers, and training providers.

Recommended First Monetization

Start with premium visibility or lead credits rather than mandatory commissions, because many local transactions may happen in cash. A commission model becomes easier after the platform earns trust and introduces payment rails.

Competitive Landscape

Current Alternatives

Facebook group posts. Messenger group chats. Word-of-mouth referrals. Barangay and neighbor recommendations. Individual pages of service providers. Classified ads or buy-and-sell groups.

Why These Alternatives Are Weak

They are unstructured and difficult to search. They do not preserve completed job history. Ratings are scattered or absent. Clients cannot compare offers cleanly. Providers cannot build portable reputation. Urgent requests may be buried by unrelated posts.

KAILA Advantage

KAILA does not need to beat large global apps on technology. It must beat informal referral systems on organization, trust, availability, and local density.

Go-To-Market Strategy

Pilot Principle

Supply first, demand second. Recruit enough service providers before aggressively inviting clients.

Launch Area

Begin in one city or even a barangay cluster. The target is density, not geography.

Pilot Provider Target

Recruit 50 to 100 providers across 5 to 8 high-demand categories before public launch.

Pilot Client Target

Recruit 200 to 500 early clients through Facebook groups, referrals, barangay networks, friends, local businesses, and community posts.

Launch Offer

Use a free pilot. Early providers receive founding provider badges. Early clients receive priority support and easy request assistance.

Operations Plan

Provider Onboarding

Collect provider name, address area, contact number, service categories, years of experience, sample work photos, preferred service radius, and availability. Explain how offers, ratings, and client communication work. Set expectations on professionalism, pricing honesty, punctuality, and respectful communication.

Client Support

Assist clients who are unfamiliar with posting requests. Encourage clear descriptions and photo/video attachments. Remind clients to rate completed jobs. Collect feedback after first request experience.

Dispute Handling

Record complaint details from both parties. Review chat history, request details, photos, and confirmation messages. Classify issue as pricing dispute, quality issue, no-show, safety concern, scope change, or payment issue. Apply warning, temporary restriction, account suspension, or mediation guidance depending on severity.

Safety and Trust

Do not present KAILA as a guarantee that every provider is perfect. Use verification labels clearly. Encourage public place meetups for non-home jobs when appropriate. Provide safety reminders for both clients and providers. Maintain blacklists for fraud, harassment, theft, violence, and repeated complaints.

Key Metrics

- Number of verified or active providers by category.
- Number of posted service requests.
- Provider response rate within 30 minutes, 1 hour, and 24 hours.
- Offer-to-job completion rate.
- Average time from request posting to accepted offer.
- Average completed job value.
- Repeat client rate.
- Repeat provider activity rate.
- Rating completion rate.
- Dispute rate per completed job.
- Provider earnings generated through the platform.
- Gross marketplace value, or total job value facilitated.

Risk Assessment

Marketplace Cold Start

Without providers, clients will not use the platform. Without clients, providers will leave. Mitigation: recruit providers first and manually assist early matching.

Trust and Safety

Bad experiences can damage the brand quickly. Mitigation: identity verification, ratings, moderation, dispute policy, provider rules, and careful category onboarding.

Provider Inactivity

Some providers may sign up but ignore requests. Mitigation: availability status, response rate scoring, inactive provider reminders, and ranking based on responsiveness.

Facebook Habit Barrier

Users may continue using Facebook because it is familiar. Mitigation: show clear advantage through faster matching, comparison, ratings, and organized results.

Pricing Conflicts

Clients may underprice and providers may overprice. Mitigation: suggested fee ranges, transparent offers, photos/videos for better estimates, and counter-offers.

Legal and Liability Risk

Home services involve property, safety, and quality risks. Mitigation: terms of service, disclaimers, dispute process, verification, and safety guidelines; legal review before scale.

12-Month Roadmap

Months 1-2 - Validation

Interview at least 50 clients and 50 providers. Test Facebook page + Google Form manual matching. Identify top 5 demand categories. Define pilot city.

Months 3-4 - Supply Build

Recruit first 50 providers. Create provider directory. Collect work samples and verification data. Run manual matching for real requests.

Months 5-7 - MVP Development

Build web-based MVP with mobile-friendly design. Set up request, offer, messaging, rating, and admin modules. Test with internal team and selected providers.

Months 8-9 - Pilot Launch

Launch in selected area. Track requests, response time, completed jobs, and satisfaction. Hold weekly operations review.

Months 10-12 - Optimization

Refine categories, pricing guide, provider ranking, and user flows. Test one revenue stream. Prepare expansion plan only if core metrics are healthy.

Founder Roles Needed

- Business Lead - overall strategy, partnerships, decision coordination.
- Operations Lead - provider onboarding, disputes, customer support, field processes.
- Marketing Lead - Facebook campaigns, community posts, referrals, brand messaging.
- Provider Acquisition Lead - recruitment, verification, relationship management.
- Finance and Admin Lead - budgeting, records, compliance, payment tracking.
- Product and Technology Lead - MVP planning, development, maintenance, analytics.

Definition of Terms

These terms provide a shared vocabulary for reading and discussing the KAILA founder package.

KAILA

The proposed local services marketplace that helps clients find trusted local help and helps skilled workers become more visible.

Client

A person, household, business, or organization that posts a service need or hires a provider through KAILA.

Provider

A skilled worker, freelancer, technician, shop, or service professional who offers work through KAILA.

Service Request

A client post describing the job needed, location, budget, urgency, details, and optional photos or files.

Offer

A provider's response to a service request, including price, availability, scope notes, or proposed schedule.

Counter-Offer

A revised offer made when the provider or client proposes a different price, schedule, or service scope.

Marketplace

The two-sided system where clients and providers discover, evaluate, transact, and rate each other.

MVP

Minimum Viable Product; the simplest usable version of KAILA needed to test marketplace behavior.

Pilot

A limited real-world launch in one city or area used to validate demand, provider response, operations, and trust.

Concierge Pilot

A manual version of the marketplace run with simple tools such as forms, spreadsheets, Facebook, and Messenger before building the full app.

Verification

The process of checking provider identity, service information, work samples, permits, certificates, or references.

Rating

A post-job score or review used to build trust, measure reliability, and improve future matching decisions.

Dispute

A reported disagreement about price, quality, scope, completion, behavior, payment, or other job-related concerns.

Lead Credit

A future monetization unit that may allow providers to access or respond to qualified service opportunities.

Premium Profile

A future paid provider profile upgrade that may improve visibility, presentation, or trust signals.

Business Account

A future account type for shops, small businesses, teams, or organizations with recurring service needs or multiple providers.

Go/No-Go Criteria

The evidence-based thresholds used to decide whether to proceed, narrow the scope, redesign, or pause.
