KAILA Market Validation and Feasibility Study

Feasibility Study

Research plan, interview guide, pilot design, and go/no-go criteria

Purpose of Validation

The purpose of validation is to prove that the problem is real, the proposed solution is useful, and both sides of the marketplace are willing to participate before time and money are spent building a full app.

- Validate demand from clients.
- Validate willingness of providers to join and respond.
- Identify the best initial categories.
- Test pricing behavior and negotiation comfort.
- Find operational risks before development begins.
- Create evidence that future co-founders can believe in.

Research Questions

- How do residents currently find service providers?
- Which services are hardest to find?
- How urgent are these service needs?
- What makes clients trust or distrust a provider?
- Are clients willing to post their need in an organized platform?
- Are providers willing to receive job notifications and submit offers?
- What verification steps are acceptable to providers?
- What rating system feels fair to both clients and providers?
- What categories should be included in the pilot?
- What would make people switch from Facebook referrals to KAILA?

Validation Design

Stage 1 - Desk Research

Observe local Facebook groups and note how often people ask for plumbers, electricians, technicians, mechanics, layouts, repair work, or odd jobs. Record phrases used, response time, number of comments, and common pain points.

Stage 2 - Client Survey

Survey at least 100 residents in the pilot area. Use simple questions about recent service needs, difficulty, trust, price, and platform willingness.

Stage 3 - Provider Interviews

Interview at least 50 service providers across the first 5 to 8 categories. Ask how they get clients, what they charge, how far they travel, and whether they would accept app-based requests.

Stage 4 - Concierge Pilot

Before building the app, run a manual version using a Facebook page, Google Form, spreadsheet, and Messenger. Manually match clients and providers for 30 to 45 days.

Stage 5 - Go/No-Go Review

Use a scoring system to decide whether to build, pivot, narrow the category, or pause.

Client Survey Questions

- In the past 6 months, did you need a repairman, technician, designer, mechanic, plumber, electrician, or other skilled worker?
- How did you look for that person?
- How long did it take before you found someone?
- What was the hardest part of finding help?
- Did you compare prices from more than one provider?
- What made you trust the provider?
- Would you use a platform where you can post the job and receive offers?
- Would you upload photos/videos of the problem to get better estimates?
- Would you rate the provider after completion?
- Which categories would you most likely use?

Provider Interview Questions

- What services do you offer?
- How many years have you been doing this work?
- How do clients usually find you?
- How many jobs do you usually get per week?
- Do you want more clients?
- What service areas can you cover?
- Are you willing to receive job requests through phone notifications or Messenger during the pilot?
- Are you comfortable giving offers or counter-offers based on photos and descriptions?
- Would you upload ID for verification if it gives you more trust and visibility?
- What would make you stop using a platform like KAILA?

Concierge Pilot Setup

Tools Needed

Facebook page named KAILA or temporary pilot name. Google Form for client requests. Google Form for provider registration. Google Sheet or Excel tracker. Messenger group or broadcast list per category. Manual admin support by founders.

Manual Workflow

Client submits request. Operations lead checks completeness. Provider lead forwards request to matching providers. Providers reply with availability and offer. Client chooses provider. Operations lead records job result. Client and provider rate each other.

Why This Matters

If manual matching cannot produce real demand, an app will not magically solve it. The concierge pilot proves whether the marketplace behavior exists before development.

Validation Scorecard

Score each area from 1 to 5. A score of 4 or higher means the area is promising.

Area	Score 1	Score 3	Score 5
Client Pain	Rare problem	Some difficulty	Frequent and frustrating problem
Provider Interest	Low interest	Interested but unsure	Completed
Strong willingness to join	Response Speed	Slow/no response	Mixed response
Many providers reply quickly	Completed Jobs	Few/no jobs	Some jobs completed
Consistent jobs completed	Trust	Acceptance	Users avoid ratings/verification
Some acceptance	Strong acceptance of trust system	Monetization Potential	No willingness
Possible later	Clear future	paid value	

Go / No-Go Criteria

Proceed to MVP if

At least 50 providers express willingness to join. At least 30 real client requests are received in the pilot period. At least 15 jobs are successfully completed or strongly matched. Average provider response time is acceptable for the top categories. Clients and providers show willingness to rate each other.

Narrow the Scope if

Only 1 to 2 categories show strong demand. Some categories have poor provider response. Clients want help but cannot describe jobs clearly. Provider supply is strong but client demand is weak.

Pause or Redesign if

Providers refuse to participate. Clients do not submit real requests. Trust concerns cannot be managed. Facebook referral behavior is strongly preferred and KAILA adds no clear benefit.

Feasibility Notes

- Technical feasibility is high for a basic web MVP because the core system can be built with common web technologies.
- Operational feasibility depends on provider recruitment and dispute handling, not just software.
- Financial feasibility depends on keeping early costs low and avoiding premature paid advertising.
- Market feasibility depends on local density. One city with strong adoption is better than nationwide weak adoption.

Definition of Terms

These terms provide a shared vocabulary for reading and discussing the KAILA founder package.

KAILA

The proposed local services marketplace that helps clients find trusted local help and helps skilled workers become more visible.

Client

A person, household, business, or organization that posts a service need or hires a provider through KAILA.

Provider

A skilled worker, freelancer, technician, shop, or service professional who offers work through KAILA.

Service Request

A client post describing the job needed, location, budget, urgency, details, and optional photos or files.

Offer

A provider's response to a service request, including price, availability, scope notes, or proposed schedule.

Counter-Offer

A revised offer made when the provider or client proposes a different price, schedule, or service scope.

Marketplace

The two-sided system where clients and providers discover, evaluate, transact, and rate each other.

MVP

Minimum Viable Product; the simplest usable version of KAILA needed to test marketplace behavior.

Pilot

A limited real-world launch in one city or area used to validate demand, provider response, operations, and trust.

Concierge Pilot

A manual version of the marketplace run with simple tools such as forms, spreadsheets, Facebook, and Messenger before building the full app.

Verification

The process of checking provider identity, service information, work samples, permits, certificates, or references.

Rating

A post-job score or review used to build trust, measure reliability, and improve future matching decisions.

Dispute

A reported disagreement about price, quality, scope, completion, behavior, payment, or other job-related concerns.

Lead Credit

A future monetization unit that may allow providers to access or respond to qualified service opportunities.

Premium Profile

A future paid provider profile upgrade that may improve visibility, presentation, or trust signals.

Business Account

A future account type for shops, small businesses, teams, or organizations with recurring service needs or multiple providers.

Go/No-Go Criteria

The evidence-based thresholds used to decide whether to proceed, narrow the scope, redesign, or pause.
